

Data Analytics is a subscription service offer for Wattstopper (BCS) networked lighting control systems which provides visualization of data and periodic performance reports. The lighting control system operational data is provided in both graphical and chart views allowing the user to quickly understand the current operational status. Dashboard information is updated every 15 minutes to give real time data, allowing quick understanding of changing conditions. Data Analytics is based on the control system information sent through a database streaming engine where it is compiled and processed into the visual interface. Using both up to date operational information and general trends, operational patterns are monitored for opportunities for performance enhancements. Viewing data over time allows the implementation of long term goals and tracking the impacts of improvement measures.

Features & Benefits

Real Time Data Visualization

Operational Anomaly Tracking

Periodic System Performance Reviews

Web-based User Interface

Unlimited User Licenses and 24/7 Access

Specifications
